Professional Summary

Cybersecurity Analyst with hands-on SOC lab experience in Wazuh SIEM, Sysmon telemetry, Windows event logging, threat emulation, and detection engineering. Skilled in endpoint monitoring, PowerShell-based investigation, and building detection logic for real-world attack behaviors. Strong understanding of Windows security events, SIEM rule creation, and threat-hunting workflows. Currently pursuing CompTIA Security+ while advancing SOC analyst skills through practical home-lab projects.

Core Cybersecurity Skills

- **Threat Hunting** — IOC analysis, behavioral detection, event correlation
- **SIEM Operations** — Wazuh, Elastic Stack, log ingestion, rule tuning
- **Endpoint Telemetry** — Sysmon, Windows Event Logs, DNS/Process/Registry monitoring
- **Detection Engineering** — rule creation, event mapping, log validation
- **PowerShell Investigation** — `Get-WinEvent`, process/network enumeration
- **Network Security** — IPv4/IPv6, DNS, routing, subnets
- **Virtualization** — VirtualBox multi-VM SOC lab
- **Tools:** Wazuh, Sysmon, Wireshark, Hydra, Nmap, Windows Event Viewer, Ubuntu Server

Cybersecurity Projects & SOC Lab Work

Wazuh SIEM Deployment & Threat-Hunting Lab

- Built a complete SOC home lab with Ubuntu SIEM server, Windows 10 endpoint, and attacker VM.
- Configured Wazuh agents, Sysmon, and custom rules for Windows event monitoring.
- Investigated events such as process creation (ID 1), network connections (ID 3), DNS queries (ID 22), registry changes (ID 13), file creation (ID 11), and privilege assignments.
- Used Wazuh Threat Hunting dashboard to correlate events and validate detection logic.

Sysmon Telemetry Engineering

- Installed and tuned Sysmon to capture high-value security events.
- Queried Sysmon logs using PowerShell to validate telemetry before forwarding to SIEM.
- Analyzed event chains to identify suspicious behavior patterns.

Hydra Brute-Force Attack Simulation

- Executed controlled brute-force attempts from attacker VM to test detection capabilities.
- Observed authentication failures, network activity, and correlated events in Wazuh.
- Documented detection workflow and response steps.

Windows Logging & PowerShell Investigation

- Used PowerShell to retrieve Sysmon Operational logs and inspect recent security events.
- Enumerated network adapters, DNS queries, process activity, and registry modifications.
- Created structured SOC-style documentation for analysis.

Education

LaGuardia Community College — Cybersecurity Major (Year 1)

2026 – Present Relevant Coursework: Networking, Operating Systems, Digital Design, Cybersecurity Fundamentals, Security+ Prep

Certifications

- **Full-Stack Software Engineering Micro-Credential — Queensborough Community College**
- **CompTIA Security+ (In Progress)**

Technical Tools

Wazuh SIEM • Sysmon • PowerShell • VirtualBox • Hydra • Wireshark • Windows Event Viewer • Ubuntu Server • GitHub • JSON/YAML rule configuration
